

## ABOUT CLOUDPASSAGE

---

How do you keep workloads secure in highly automated cloud computing environments like AWS and Azure? Traditional security products don't work well in these environments. They require too much manual effort to deploy and operate, and they don't align with modern processes like DevOps and containers.

---

## CLOUDPASSAGE HALO DELIVERS FRICTIONLESS SECURITY

CloudPassage has solved this problem. CloudPassage® Halo® is a workload security automation platform that offers on-demand delivery of security controls across data centers, private/public clouds, virtual machines and containers – at speed and scale. The Halo platform integrates with automation and orchestration tools such as Puppet, Chef, Ansible and Jenkins, allowing DevOps teams to operate efficiently while providing security teams the validation they require.

## CLOUDPASSAGE HALO

### CONFIGURATION SECURITY MONITORING

Evaluate servers against the latest configuration policies in seconds with almost no CPU utilization. Monitor your Docker configuration for conformance with CIS and NIST benchmarks.

### SOFTWARE VULNERABILITY ASSESSMENT

Scan thousands of images, containers, VMs and hosts in minutes to maintain continuous exposure awareness.

### SERVER ACCOUNT MONITORING

Easily monitor who has accounts on which servers, what privileges they operate under and how accounts are being used.

### FILE INTEGRITY MONITORING

Protect the integrity of your cloud servers by constantly monitoring for unauthorized or malicious changes to important system binaries or files.

### LOG-BASED INTRUSION DETECTION

Monitor key server log files for events that should not happen, indicating misuse, misconfiguration, or a compromise.

### WORKLOAD FIREWALL MANAGEMENT

Easily deploy and manage dynamic host firewall policies and assign them to groups of servers.

### IMAGE ASSURANCE

Ensure images are trusted from the beginning to the end of the software development lifecycle.

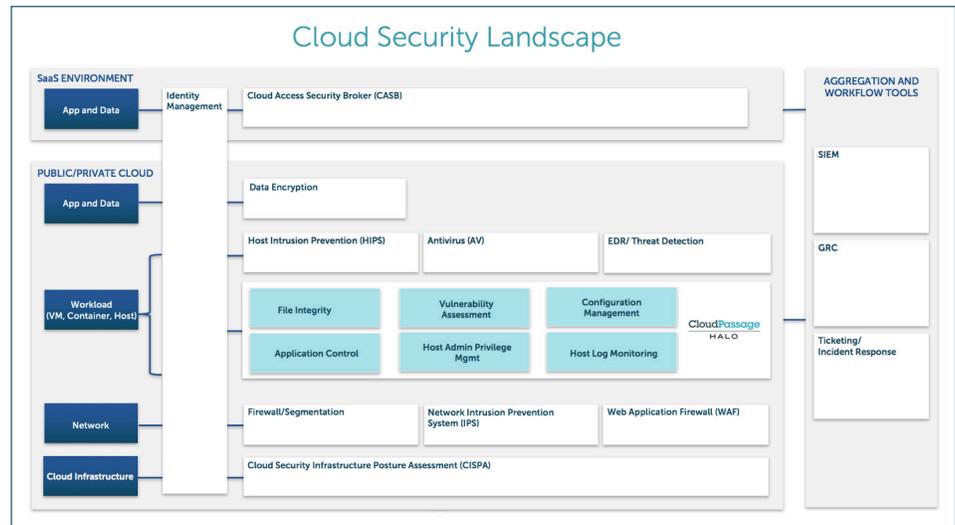

### DEVOPS INTEGRATION

Integrate with common registries and CI/CD tools such as Jenkins and Bamboo using our pre-built integrations or any other tools with our rich RESTful API.

## CUSTOMERS

Where does CloudPassage fit into the cloud security landscape?

Founded in 2011, CloudPassage® was the first company to obtain a U.S. patent for cloud infrastructure security. CloudPassage Halo® is a workload security automation platform, delivered as a service, that provides visibility and protection for data centers, private/public clouds and containers. Halo deploys in minutes and scales effortlessly. Today, CloudPassage secures the infrastructures for many of the Fortune 1000.
